Education

Texas A&M University, College Station, TX
Bachelor of Science in Computer Science, Minor in Business

Estimated Grad: May 2027
GPA 3.5

Skills

Programming Languages: Python, SQL, JavaScript, TypeScript, Java, C#, C++, HTML, CSS

Frameworks & Tools: LangChain, LangGraph, LangSmith, React, Node.js, Git, PostgreSQL, REST APIs

AI & Software Concepts Deep Agents, RAG workflow design, Agent Evaluation (LLM-as-a-judge), Context Management, Prompt Engineering, Token & Latency Optimization, Model Context Protocol (MCP), LoRA / Fine-tuning, API Design

Experience

Halliburton | Gen-AI Platform Engineer Intern

May 2026 - August 2026

- Engineered an AI agent using **LangChain**, **LangGraph**, and **MCP**, applying **deep-agent** patterns to plan tasks, retrieve evidence, invoke tools, and generate grounded technical responses and executable code.
- Developed **RAG workflows** that retrieved relevant context from internal technical documentation, to answer developer questions accurately.
- Optimized agent context management using structured state and selective context hydration, **reducing token** usage by **78%** and response **latency** by **50%** while **improving** evaluated response **quality** by **23.5%**.
- Built a **LangSmith evaluation** and regression **testing pipeline** to **measure** agent accuracy, retrieval quality, **latency** and **token cost**, across iterations.
- Constructed an automated validation pipeline for **AI-generated code**, leveraging **LLM-assisted** sanitization and sandboxed execution to identify unsafe, invalid, or incorrect generated code before execution or delivery.

Projects

AI-Powered Job Application Tracker | Personal Project

November 2025 - February 2026

- Fine-tuned** a LLaMA-based model leveraging **LoRA fine tuning** to extract structured job application data, including company, position, and hiring stage, from real-world application emails ingested through the Gmail API.
- Integrated an AI service into a **full-stack** job-tracking web application developed with **React** and **Node.js**, **automating** application status updates across the hiring pipeline.

Besco Custom Jewelers Website | Freelance Full-Stack Project

April 2026 - August 2026

- Established a responsive **full-stack e-commerce website** using **React**, **Node.js**, and **PostgreSQL**, working directly with the business owner to translate requirements into production-ready customer features.
- Developed real-time customer-to-owner messaging through **Web Sockets** and integrated **Shopify**-hosted checkout to support product purchasing and order processing.
- Incorporated **third-party inventory APIs** to retrieve, process, filter, and render jewelry and loose-diamond data within a custom product discovery experience.

Panda Express POS Ecosystem | Class Project - Full-Stack web app

September 2025 - December 2025

- Utilized **third-party APIs** (**Gemini**, Google Translate, Trello) to provide multilingual support, **automated task tracking**, and an **agentic AI-powered assistant** that helps customers build orders in real time.
- Built and deployed a **full-stack React** and **Node.js/Express** POS ecosystem supporting customers, cashier, manager, and kitchen workflows across multiple devices.

Activities/Leadership

Grace Bible Church (Kids Room Lead) | Led children of various ages in engaging activities

Sambica (Male Counselor) | Directed kids through dynamic, rapidly changing environments while encouraging growth

Student Bonfire (Head Fleet Mechanic/Mech Pot) | Adapted communication style to meet the needs of non-technical supervisors and clients, ensuring clarity while equipping them to make informed decisions

Off-Campus Aggies (Head Supervisor/Yellow Pot) | Oversaw a cross-functional team that was in charge of 50+ students within an active construction site, coordinating large-scale tasks such as cutting and transporting 40+ trees a day

Certificates/Awards | Eagle Scout, Unity Certified User
